

Milwaukee Police Department

2015 Annual

Homicide & Non-Fatal Shooting Report

VISION

A Milwaukee where all can live safely and without fear, protected by a police department with the highest ethical and professional standards.

MISSION

In partnership with the community we will create and maintain neighborhoods capable of sustaining civic life. We commit to reducing the levels of crime, fear, and disorder through community-based, problem-oriented and data driven policing.

Executive Summary

- In 2015, there were 145 homicides in the City of Milwaukee, which is the highest number of homicides the city has seen in any year since 1993. This represents a 69% increase from 2014 (86).
- This increase follows some of the lowest numbers in decades. Milwaukee averaged 119 homicides between 1994-2004, while averaging 96 homicides between 2005—2015.
- [Cities of similar demographics to Milwaukee, including Baltimore and St. Louis, have seen drastic increases in homicides in 2015.](#)¹
- The violence in Milwaukee is “overwhelmingly concentrated in disadvantaged neighborhoods characterized by high rates of intergenerational poverty” and the “increase in homicides is related to Argument/Fights between individuals or groups unrelated to other criminal activity.” [-Chief Edward Flynn, NPR, 9/5/2015](#)²
- In 6 of the past 9 years, the area encompassed by zip code 53206 has led Milwaukee in homicides.
- “What I can report is that our robbery-related homicides are down significantly compared to last year, but those homicides that derived from arguments, fights, and retaliation among those people that have significant criminal records is up over 100%. That by itself is driving this homicide total.” [-Chief Edward Flynn, WPR, 9/5/2015](#)²
- In 2015, there was a 30% decrease in robbery-related homicides and a 58% increase in homicides stemming from an Argument/Fight.
- District 7 led Milwaukee with 40 homicides in 2015. This accounts for 28% of the city’s overall homicides. The 40 homicides also represent a 264% increase from District 7’s 2014 homicides (11).
- In 2015, there were 33 accidental, self-inflicted shootings (1 fatal, 32 non-fatal), compared to 13 in 2014. This represents a 158% increase.

Data Notes & Methodology

- Data in this report was retrieved from the OMAP (Office of Management, Analysis, and Planning) Homicide and Non-fatal Shooting Databases, and counts victims of homicides and non-fatal shootings.
- Homicide data only includes UCR reportable incidents. This data does not include self-defense or police-related incidents.
- Clearances are calculated in accordance with the [Federal Bureau of Investigation definition](#) (FBI).¹ The FBI defines a clearance as an incident in which an offender is arrested, or the incident is cleared by exceptional means.
- The total UCR clearance rate is calculated by the following algorithm:

$$\frac{(\text{cleared UCR homicides in 2015} + \text{cleared UCR homicides in 2015 that occurred in prior years})}{\text{Total UCR homicides in 2015}}$$

- Homicide clearance data was retrieved from the Milwaukee Police Department's Metropolitan Investigations Division.
- Clearance data is accurate as of 01/08/2016.
- Comparable clearance rates are clearance rates recorded by the FBI for cities with a population of 500,000-999,999.
- Data for police district density maps capture homicide data since 2005 and non-fatal shooting data since 2006. All other data captures the date range of 1/1/2007-12/31/2015.

Homicide Victims

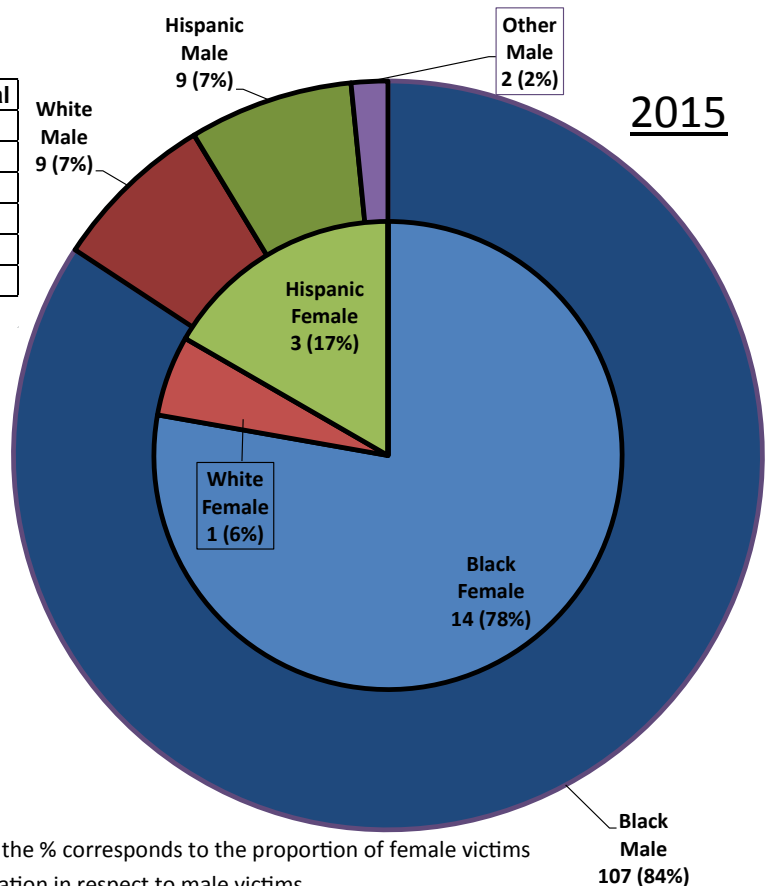

- Black males accounted for the largest proportion of homicide victims in 2015 (74%). Black females accounted for the second largest proportion of homicide victims in 2015 (10%).
- 18-29 year olds accounted for over half of the city's 2015 homicide victims (52%). This is a slight increase from 2014 (44%).
- There was a slight decrease in homicide victims between the ages of 30-39 (24% of all 2014 victims, 21% of all 2015 victims).
- In 2015, 84% (122) of homicide victims had a prior arrest with the Milwaukee Police Department.
- There were 11 double homicides in 2015, 7 of which occurred before May. This is a 120% increase from the 5 double homicides that occurred in all of 2014.
- 20 (14%) 2015 homicide victims had an involvement in a prior homicide or non-fatal shooting in the City of Milwaukee dating back to 2005. Involvement includes victims and/or suspects.

	2014	% of Total	2015	% of Total

Homicide Primary Factors

- In 2015, 34% of homicides carried a primary factor of “Unknown”. This represents an increase from 2014 (19%).
- 26% of homicides carried a primary factor of “Argument/Fight”. This is consistent with 2014 (28%).
- In 2015, 8% (12) of homicides were domestic violence-related (5 year average is 11).
- There was a slight increase in drug-related homicides in 2015 (10%), compared to 2014 (7%).
- There was a decrease in robbery-related homicides in 2015 (5%), compared to 2014 (12%).

IN SOME JOBS, SUCCESS IS MEASURED
BY WHAT DOESN'T HAPPEN.

BE A FORCE

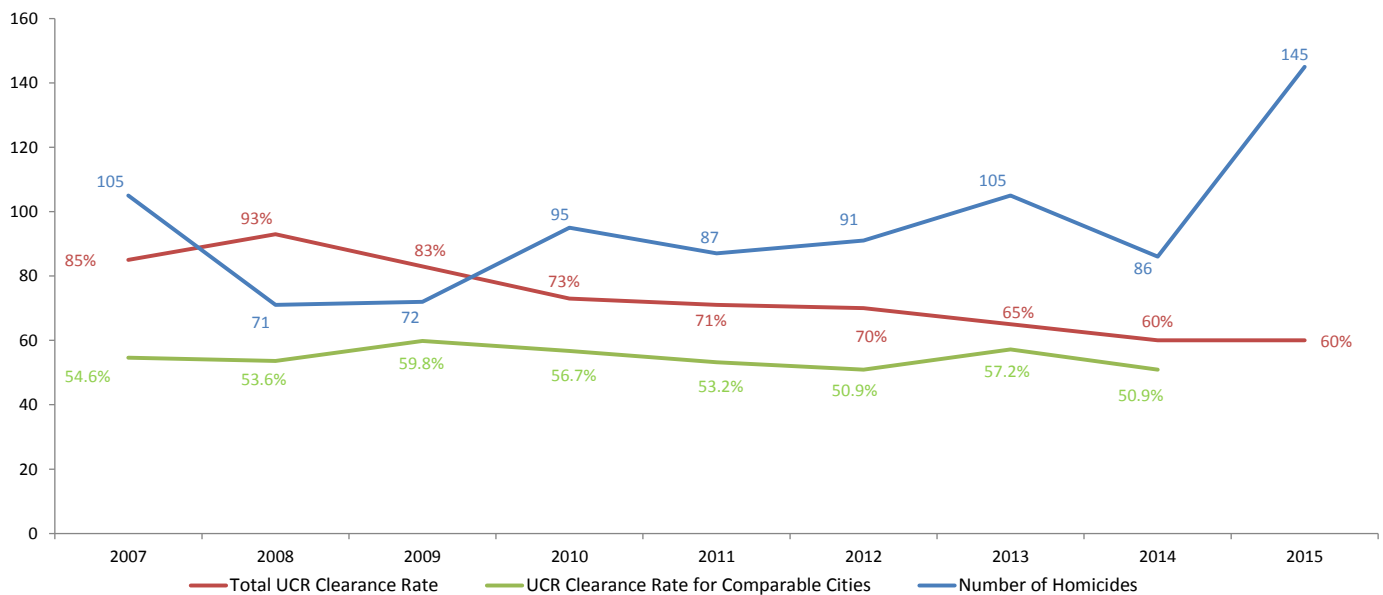

Homicide Clearances

- In 2015, the total UCR clearance rate was 60%. This includes 13 homicides from previous years that were cleared in 2015.
- The total UCR clearance rate for Milwaukee has remained above the UCR clearance rate for comparable cities.
- 20 of the 2015 cleared homicides occurred in District 7, which is the most of any police district in 2015. District 7 also led the city in overall homicides with a year end total of 40 (28%).
- Of the 74 cleared homicides in 2015, 30 (41%) had a primary factor of "Argument/Fight."

Homicide Clearances by District

	Cleared	Pending	2015 % Cleared	2014 % Cleared
District 1	1	0	100%	N/A
District 2	18	3	95%	60%
District 3	10	16	42%	71%
District 4	14	9	70%	44%
District 5	21	21	57%	61%
District 6	2	2	50%	50%
District 7	21	20	53%	55%
Total	87	71	60%	60%

Homicide clearance totals in the above table reflect total UCR clearances. Totals will not sum up to the number of homicides that occurred in 2015, since the data includes those homicides that were cleared in 2015 that occurred in prior years. 2015 UCR clearance data for comparable cities is not available.
